

I would like to comment against RM-10352 petition by the ARRL and all supporters of this bandplan that do not need any enforcement.

If the band is working and actually people has been using the 160 meters band for years the way it is, why we need to enforce whar doesn/t need any enforcement?

Usually some CW ( telegraphy) users are willing to enforce some part of the band to KEEP less potion for SSB ( voice) operators and this is giving MORE space to CW and less to SSB users when we ALL have the same rights and this is not fair. Rulemaking of the bandplan will give ALL band to CW users and SSB will lost some part when now we ALL have equal access to any segment of this band.

Please DO NOT accept the ARRL rulemaking petition RM-10352 because doing this, the FCC will be giving more bandwidth to a select group and taking bandwidth from others who don't care about CW or just use more SSB in a daily basis.

The ham radio community for years work 160 meters the way it is. Let's keep the band the way is is now because is working. This petition RM-10352 is nonsense, unfair and just needed because a small group of people don't like SSB activities and rulemaking will only provide extra privileges to a select group of people and we don't need that.

Thanks
